

Make the handoff dependable

A useful integration contract covers the business exchange as well as the technical connection.

01

Meaning

Agree what the exchange represents and which states matter.

02

Authority

Name the source of record and the owner of the service.

03

Access

Define who or what can perform each action.

04

Change

Explain version changes and their effect on consumers.

05

Failure

Specify errors, safe retries, and duplicate handling.

06

Recovery

Establish escalation, resolution, and reconciliation.

Test the whole business flow

A successful connection is one check. Test meaning, representative failures, and the operating response across every important boundary.
